StormPro® 320 Assembly
UL Classified to ICC 500-2014
For Light Commercial and Residential Applications

Tornadoes are nature’s most violent storms. Winds can reach 250 miles per hour, and entire neighborhoods can be destroyed within seconds. Tornadoes arrive with little warning (20 minutes on average) and can leave just as quickly. It is so important to have a 3rd party certified door opening installed with approved hardware so that the opening is less likely to fail in a Tornadic event. This is why Ceco Door is now supplying 3rd party tested and certified hardware as part of the StormPro 320 assembly. All products have been tested in accordance to FEMA 320 guidelines and ICC 500-2014 Standards. This will help eliminate any guess work when sourcing all of the door, frame and hardware components of the FEMA 320 assembly. When the FEMA 320 door assembly is ordered through Ceco Door, the approved hardware from SARGENT, MCKINNEY and MEDECO will be supplied loose with the order and will be ready to install at the jobsite.

The Ceco Door Factory Glazed StormPro 320 systems are complete opening solutions designed to protect against extreme winds. This assembly shields against flying debris and helps to ensure the safety of occupants in safe rooms and storm shelters of small business or residential homes during a tornado without compromising operation and aesthetics in normal use.

Visit www.cecodoor.com or contact an ASSA ABLOY Door Security Solutions representative for more information.

Sizes:
- Width: 2’8” – 3’0”
- Height: 6’8” – 7’0”

Frame
- Gauge: 16 gauge minimum
- Corner Construction: KD or welded corners
- Jamb Depth: 4” min. to 14” max
