StormPro® Tornado Resistant Assemblies
UL Classified to ICC500-2014

CURRIES developed StormPro® products to resist missile penetration of buildings designed as shelters to protect occupants from injury. Today, StormPro® assemblies are available in either an in swing or out swing design in single or paired door openings.

Applications:
- Community Shelters
- Safe Rooms
- Corporate Campuses
- Schools and Government Facilities

Features:
- UL classified to ICC 500-2014, up to 4'0" x 8'0" singles and 8'0" x 8'0" pairs
- Glazed assemblies available with optional 90 UL certified fire rating
- Flush assemblies are UL Certified for up to and including 3 hour fire ratings
- Single and paired shutter options with three or four sided frames available

The extra heavy duty StormPro® assemblies helps to fortify the opening to withstand extreme wind speeds and flying debris during a tornado. StormPro doors and frame assemblies meet the requirements for fire protection, ICC 500-2014 and FEMA guidelines.

Sustained winds of 130 mph to 250 mph are generally associated with tornados. Building owners in tornado-prone areas must take proper precautions to protect occupants. Damage can be caused by flying debris (referred to as windborne missiles). If wind speeds are high enough, missiles can be propelled at a building with enough force to penetrate windows, walls or the roof. An object such as a 2" x 4" wood stud weighing 15 pounds, when carried by a 250-mph wind, can have a horizontal speed of 100-mph. The resulting impact force will penetrate the most commonly used building materials.
ASSA ABLOY StormPro® Assemblies Meet UL Certification for Fire, ICC 500-2014 and FEMA Guidelines

Important Notes and Options*
- Frame head face: 2" standard, optional 4"
- Communicating frame option with multi-point lock
- Anchors: masonry and existing opening
- Material: galvannel or cold rold steel
- Lock hardware: electronic trims available with ElectroLynx® Connectors (Reference hardware templates for details)
- Hinges: McKinney SP 4-1/2" HW steel hinges minimum, Markar steel continuous and wide throw continuous hinges optional
- Undercut: determined by door condition (reference hardware template for details)
- Other hardware options include closers, stop/holder, kick plates, position switches, power transfers, rod guards, and viewers
*See Curries Door Tech Manual for more details.

Test Procedures
- FEMA 320 “Taking Shelter from the Storm” August 2014

Corbin Russwin FE6600 and SARGENT FM7300 concealed vertical rods, top and bottom bolts, and mortise lock body cassette must be on factory installed in a CURRIES StormPro door. All other hardware components are shipped directly from SARGENT or Corbin Russwin and must be installed by a factory trained installer. Important: do not remove any hardware blocking or filler plates in the door or the frame until the mortise lock is ready to be installed.
