More Hurricane Solutions From Ceco Door

In areas subject to extreme wind events, building owners, school and hospital administrators, neighborhood associations, and others responsible for public safety need openings designed to meet High Velocity Hurricane Zone (HVHZ) requirements to protect occupants. Heavy duty anchoring, steel reinforcing and hardware components firmly secure the Ceco Door hurricane door within the frame.

Corbin Russwin FE6600 and SARGENT FM7300 concealed vertical rods, top and bottom bolts, and mortise lock body cassettes are only available as factory installed in a Ceco Hurricane Door. Current ordering process does not change: Doors and frames are ordered through the door brands and hardware is ordered through the hardware brands. The door price includes cost of hardware component installation into the door. The mortise lock body, trim, levers, and all other hardware components are ordered and shipped directly from SARGENT or Corbin Russwin and must be field installed by a factory trained installer. Important: Do not remove any hardware blocking or filler plates in the door or the frame until the mortise lock is ready to be installed.

Ceco Door continues to be the leader in providing hurricane solutions designed to help protect property and lives.
