REVISED ANNOUNCEMENT

6300 OPERATOR UPDATE

Norton Door Controls is pleased to announce the addition of 6300 Series low energy operators that can be used on pairs of 36” doors. Models 6311, 6331, and 6351 are more than 2” shorter than current models and include the following enhancements:

» Backplate PCB replaced with harnesses
  » Reduces total number of connectors (for installers) from 8 to 4
  » Existing connectors are more easily accessible
» Main PCB functionality added
  » 585 sensor capability
» Change in terminology
  » Lock Release name changed to Latch Assist
  » NO change in functionality
» Updated installation instructions
  » More detailed drawings include all connector and connection points
  » Standard wiring diagrams added

In addition to the models listed above, we will also offer a universal operator. Model 6341 will include both pull and push arms; the closer body can be easily reversed in the field.

Norton will continue to manufacture 6310, 6330 and 6350 operators for applications where a cover spanning the full frame (36” single doors) is desirable. These models do not include the enhancements listed above.
