ASSA ABLOY
STORMPRO 361 SHUTTER FRAME INSTALLATION
FOR MASONRY WALL CONDITIONS:
FRAME MUST BE FULLY GROUTED WITH MIN. 1800 PSI CONCRETE
WHEN INSTALLING WITH WIRE OR MASONRY "T" JAMB ANCHORS.

JOBSITE STORAGE: Store frames off the ground on at least 4" high wood runners or skids, in a
manner that will prevent rust or damage. Do not store directly on the ground. Assembled frames shall
be stored vertically. Cover frames with tarpaulin or plastic but do insure that adequate ventilation is
provided to eliminate moisture condensation. When frames are to be fully grouted, and especially
when mortar contains "anti-freezing" agents, the inside of the frame should be coated with a
corrosion resistant material by the installation contractor. Silencers/Mutes must be installed prior to
grouting.

PLUMBING of FRAME

The installer should use wood spreaders (as described at right), a
carpenters level (the longer the better),
and a carpenters square (the bigger the better). Set the frame in the desired
location. Level head and sill. Plumb jambs. Shim under sill if necessary.

Typical wood spreaders must be square and made
from lumber at least 1" thick. Length of spreader
equals door opening width at the head. Cut
clearance notches for frame stops as shown.
Spreader must be nearly as wide as frame depth for
proper installation.
NOTE: Frame is setup and welded.

Brace the frame.

PLUMB AND SQUARE JAMBS.
When installing wire or masonry "T" jamb anchors, install a piece of tie wire around the frame, just below center of vertical opening height. Twist tie wire tight as this creates inward tension. The tension will hold a spreader in place. Spreaders should be located just above the tie wire.

FRAME HEAD ANCHORS:
EXISTING OPENING DIMPLES W/ BOLTS OR WELD TO BUILDING STRUCTURE
2 ANCHORS PER HEAD UP TO 3'0"
3 ANCHORS PER HEAD OVER 3'0" THRU 4'0" EQUALLY SPACED.

SILL ANCHORS:
EXISTING OPENING DIMPLES W/ BOLTS OR WELD TO BUILDING STRUCTURE
2 ANCHORS PER SILL UP TO 3'0"
3 ANCHORS PER SILL OVER 3'0" THRU 4'0" EQUALLY SPACED.

NOTE: REFER TO WWW.CECODOOR.COM

INSTALLING THE FRAME
Continue checking for plumb and square.
Install jamb anchors at locations shown below.
Fully grout frame through. Lightly tap jamb so mortar can settle. Continually check plumb and square as wall progresses.
Existing Opening jamb anchors do not require frame to be grouted.
CHECK: The difference between diagonals measured from opposite corners as they should not exceed 1/16".
Clear any mortar out of hinge pockets, strike reinforcements and other mortised hardware preparations.
