1 Tools Required

- #2 & #3 Phillips head screwdrivers
- Flat blade screwdriver
- 1/8" Allen Wrench
- 3/8" Drill bit
- T-20 Torx Screw with Tamper Pin Driver
2 Indicator Variants

Depending on function and option ordered, indicators are provided in the following variations, these instructions detail how to install with cylinder, however other variations follow similar instructions. (Figure 1)

- Contact factory with questions.

3 Lock set configuration

To set function of multi-function lock or to re-hand, see instructions on lock body.

4 Rehanding Indicator (if required)

Verify hand and bevel of door. (Figure 2)

Note:
Stand outside of locked door when determining door hand.

Next, verify inside and/or outside indicators are handed correctly, using Spindle Cam Position chart. (Figure 3)

If they are handed correctly, skip to Step 5 “Prepare Door”.

If they are not handed correctly:

1. Remove indicator back plate by pulling out from top slot, then remove spindle cam from assembly. (Figure 4)

2. Position spindle cam in correct direction for door hand. (Figure 3)

Important:
- For thumbturn indicators, make sure thumbturn is positioned in 12 o’clock direction as shown. (Figure 5)

3. Slide spindle cam post into the correct slot of the display slide. (Figure 4)

4. Re-seat back plate into original position.

5. Return indicator to vacant/unlocked position for installation.
5 Installation

a Prepare Door

Prepare door for function holes, size, and location according to A8258 door marker template, if not already prepped.

b Install Lock

1. Verify strike location according to template. Clean out door pocket and door edge of debris.
2. Ensure handing of lock and door match. Slide lock into door. (Figure 6)
3. Temporarily hand tighten two (2) lock screws (#12 x 1-1/4" wood screws, or #12-24 x 1/2" machine screws).

Note:
Keep door open until installation is complete.

c Install Outside Trim

1. Verify lock is in unlocked state (control hub slot should be vertical). Also, verify indicator is in vacant/unlocked position.
2. Align trim posts with diagonal holes in door, be sure lever is horizontal. Slide outside escutcheon assembly through lock body from outside door face. (Figure 7)

Note:
If indicator is used on outside, align indicator spindle with control hub.

d Install Inside Trim

1. Slide spindle into lockbody hub. (Figure 8)
2. Slide adapter and plate assembly over spindle.
3. Secure with two (2) #8-32 x 5/8" screws.
4. For Studio Collection levers only, use trim bushing over adapter plate.
5. Verify lock is in unlocked state (turn outside lever to ensure). Also, Verify indicator is in vacant/unlocked position.
6. Align escutcheon over adapter and install inside escutcheon assembly onto inside door face.

Notes:
- If indicator is used on inside, align indicator spindle with control hub.
7. Through-bolt inside escutcheon to outside escutcheon with two (2) #8-32 x 2-1/4" screws.
8. Install inside lever on adapter plate. Secure with set screw.

Note:
Screw heads should be visible on inside escutcheon.
5 Installation (cont.)

Install Cylinder
1. Thread cylinder into lock until flush with escutcheon surface. (Figure 9)
   - Pull key slightly out of cylinder to help thread into lock body.
2. Tighten cylinder clamp screw with #1 Phillips screwdriver.
   - Check operation and adjust cylinder if necessary.

Notes:
- SARGENT logo must be horizontal and on top. (Figure 10)
- If double cylinder function is used, repeat steps 1 and 2 for second cylinder.
- Removable Core or Interchangeable Core cylinders require a control key (key stamped with C) to remove and install the core. This is not provided standard; it must be requested separately. If requesting 1-bitted control key, specify 113511 cut.

Install Outside Front
1. Tighten the two (2) lock screws completely. (Figure 11)
2. Attach outside front with two (2) flat head screws #8-32 x 1/4”.

Perform Functional Check
DO NOT FORCE if resistance is encountered during functional check. Refer back to Rehandering Indicator (if required) section to ensure correct handing. Rehand if necessary.
1. Insert key into cylinder (if present) and rotate:
   - Ensure there is no friction against lock case or any other obstructions.
2. Check key retracts latch:
   - Key should rotate freely.
3. Throw deadbolt (if present):
   - Check key retracts both deadbolt and latch.
4. Test levers:
   - Confirm latch and deadbolt (if installed) retract.
5. Verify indicator displays correct status when locked and unlocked.
